

Pass-Thru Pharmacy Refrigerators

Pass-thru pharmacy refrigerators have sets of doors on both the front and back faces of the chamber. Typically the doors are the hinged type (swinging) which tightly seal in the refrigerated air to help maintain critical temperature uniformity. However, gliding doors offer a space advantage in tight passage ways and are often preferred on one side of the unit. Pass-thru pharmacy refrigerators have an easy-to-read digital display. An access port located in the chamber ceiling allows for sensor penetration and the cooling coils are electrofin coated to protect them from some harsh sanitizers. Frequently requested options, such as a stainless steel interior or exterior, trim kit, and chart recorder can be found on our accessories sheet.

- ~ 2-10°C temperature uniformity
- ~ Microprocessor control with digital temperature display
- ~ Access port in chamber ceiling for sensor entry
- ~ Electrofin coated cooling coils
- ~ On/off interior light switch for LED door lights
- ~ Bottom mounted compressor for quiet performance and best energy efficiency
- ~ Stainless steel interior bottom pan to resist corrosion
- ~ Power cord exits through roof of cabinet for safety and security
- ~ One year warranty (P&L), four additional years on compressor (domestic)
